## BT-4/M-20 <br> SURVEYING-II CE-210N

Time : Three Hours]
[Maximum Marks : 75

Note : Attempt Five questions in all, selecting at least one question from each Unit.

## Unit I

1. (a) Explain about reconnaissance survey in detail. Write the paints to be kept in mind while selecting triangulation section.

7
(b) The-attitudes of two-proposed stations A and B. 100 km apart are respectively 420 m and 700 m . The intervening obstruction situated at $\mathrm{C}, 70 \mathrm{~km}$ from A has an elevation of 478 m . Ascertain if A and B are intervisible and if necessary, find by how much $B$ should be raised so that the line of sight must nowhere be less than 3 m above the surface of the ground ? 8
2. (a) Discuss the base of the object inaccessible when instrument station not in the same vertical plane as the elevated object.

7
(b) In the trigonometrical measurement of the difference in level of two stations P and Q. 10480 m apart the following data were obtained :

Instrument at P , angle of elevation of $\mathrm{Q}=0^{\prime} 15^{\prime \prime}$ Height of instrument at $\mathrm{P}=1.42 \mathrm{~m}$

Instrument at Q , angle of depression of $\mathrm{P}=3^{\prime} 33^{\prime \prime}$
Height of Instrument at $\mathrm{Q}=1.45 \mathrm{~m}$
Height of signal at $\mathrm{P}=3.95 \mathrm{~m}$
Height of signal at $\mathrm{Q}=3.92 \mathrm{~m}$
Find the difference in level between P and Q and the curvature and refraction correction. Take R $\sin 1^{\prime \prime}=30.38$ metres .

## Unit II

3. (a) Define the following :
(i) Most probable value
(ii) Most probable error
(iii) True error
(iv) Residual error.
(b) An angle A was measured by different persons and following are the values :

| Angle | Number of Measurement |
| :---: | :---: |
| $65^{\circ} 30^{\prime} 10^{\prime \prime}$ | 2 |
| $65^{\circ} 29^{\prime} 50^{\prime \prime}$ | 3 |
| $65^{\circ} 30^{\prime} 00^{\prime \prime}$ | 3 |
| $65^{\circ} 30^{\prime} 20^{\prime \prime}$ | 4 |
| $65^{\circ} 30^{\prime} 10^{\prime \prime}$ | 3 |

Find the most probable value of the angle. 7
4. (a) Discuss in brief the laws of weights. 8
(b) The following-observations of three engles $\mathrm{A}, \mathrm{B}$ and C were taken at one station :

$$
\begin{aligned}
\mathrm{A} & =75^{\circ} 32^{\prime} 46^{\prime \prime} .3 \text { with weight } 3 . \\
\mathrm{B} & =55^{\circ} 09^{\prime} 53^{\prime \prime} .2 \text { with weight } 2 . \\
\mathrm{C} & =108^{\circ} 09^{\prime} 28^{\prime \prime} .8 \text { with weight } 2 . \\
\mathrm{A}+\mathrm{B} & =130^{\circ} 42^{\prime} 41^{\prime \prime} .6 \text { with weight } 2 . \\
\mathrm{B}+\mathrm{C} & =163^{\circ} 19^{\circ} 22^{\prime \prime} .5 \text { with weight } 1 . \\
\mathrm{A}+\mathrm{B}+\mathrm{C} & =238^{\circ} 52^{\prime} 9^{\prime \prime} .8 \text { with weight } 1 .
\end{aligned}
$$

Determine the most probable value of each angle. 7

## Unit III

5. (a) Find the L.M.T. of observation at a place the following data :
L.A.T. of observation $=15^{\mathrm{n}} 12^{\mathrm{m}} 40^{\mathrm{s}}$
E.T. at G.M.N. $=5^{\mathrm{m}} 10.65^{\mathrm{s}}$ additive to apparent time and increasing at $0.22^{\mathrm{s}}$ per hour. longitude of the place $=20^{\circ} 30^{\prime} \mathrm{W}$. 8
(b) What are the co-ordinate systems? Explain any two. 7
6. (a) Define the following :
(i) The Azimuth (A)
(ii) The Declination ( $\delta$ ).
(b) Explain the working principle and survey with total station with neat sketch.

## Unit IV

7. (a) The scale of an aerial photograph is $1 \mathrm{~cm}=100 \mathrm{~cm}$ the photograph size is $20 \mathrm{~cm} \times 20 \mathrm{~cm}$. Determine the number of photographs required to cover an area of 100 sq . km if the longitudinal lap is $60 \%$ and the side lap is $30 \%$.
(b) What is the scale of vertical photograph ? Discuss in brief.

7
8. Explain the basic components, data input and storage output of GIS and GPS.
